## Investment risks

For complete information on risks, refer to the legal documents. The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. Debt instruments are exposed to credit risk which is the ability of the borrower to repay the interest and capital on the redemption date. Changes in interest rates will result in fluctuations in the value of the fund. The fund uses derivatives (complex instruments) for investment purposes, which may result in the fund being significantly leveraged and may result in large fluctuations in the value of the fund. The Fund may invest in a dynamic way across assets/asset classes, which may result in periodic changes in the risk profile, underperformance and/or higher transaction costs. The fund may invest in distressed securities which carry a significant risk of capital loss. The fund may invest extensively in contingent convertible bonds which may result in significant risk of capital loss based on certain trigger events. Investments in debt instruments which are of lower credit quality may result in large fluctuations in the value of the fund.

## Fund Strategy

The fund's largest allocation is to developed market government bonds. This exposure currently includes an allocation to US Treasury Inflation Protected Securities. To benefit from the additional yield available, the fund also has exposure to corporate bonds as well as some exposure to emerging market bonds.

Past performance does not predict future returns. Data points are as at month end.
