Investment risks

For complete information on risks, refer to the legal documents. The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. As a large portion of the fund is invested in less developed countries, you should be prepared to accept significantly large fluctuations in the value of the fund. As this fund is invested in a particular country, you should be prepared to accept greater fluctuations in the value of the fund than for a fund with a broader investment mandate. The fund may invest in certain securities listed in China which can involve significant regulatory constraints that may affect the liquidity and/or the investment performance of the fund.

Fund Strategy

The fund manager employs a quantitative stock selection process to harness systematic premium from multiple factors in the market. Proprietary investment factors are used to score companies in terms of their valuation, quality, momentum and sentiments appeal. The fund manager uses an optimization process that seeks to maximize exposure to those investment factors whilst targeting a risk profile that is consistent with the Fund's investment objective.
