### Investment risks

For complete information on risks, refer to the legal documents. The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. Debt instruments are exposed to credit risk which is the ability of the borrower to repay the interest and capital on the redemption date. Changes in interest rates will result in fluctuations in the value of the fund. The fund uses derivatives (complex instruments) for investment purposes, which may result in the fund being significantly leveraged and may result in large fluctuations in the value of the fund. The fund may invest in distressed securities which carry a significant risk of capital loss. As a large portion of the fund is invested in less developed countries, you should be prepared to accept significantly large fluctuations in the value of the fund. The fund may invest in certain securities listed in China which can involve significant regulatory constraints that may affect the liquidity and/or the investment performance of the fund. Investments in debt instruments which are of lower credit quality may result in large fluctuations in the value of the fund.

### Fund Strategy

The fund manager believes the key to better absolute and risk-adjusted returns in emerging markets is combining top-down macroeconomic analysis and bottom-up country analysis to allocate risk across interest rates and foreign currencies. With an investment horizon of 9 to 18 months, the fund manager believes that while the macroeconomic base case changes slowly, market pricing changes more rapidly, providing opportunities to take advantage of shifting risk premia.

Past performance does not predict future returns. Data points are as at month end.

**This marketing communication is directed at retail clients in the UK. Investors should read the legal documents prior to investing. Data as at 30 April 2024, unless otherwise stated.**

If the fund's investments do not generate sufficient income, the fixed distribution rate may be reduced. A portion or all of the fees and expenses payable by and attributable to the fixed distribution share classes may be charged against capital in order to ensure there is sufficient income to meet the fixed distribution payments. Investors should note that the charging of fees to capital in this manner will result in capital erosion and constrain future capital growth for such share classes. Effective 30 September 2022, the distribution rate is set at 6.00%. This is marketing material and not financial advice. It is not intended as a recommendation to buy or sell any particular asset class, security or strategy. Regulatory requirements that require impartiality of investment/investment strategy recommendations are therefore not applicable nor are any prohibitions to trade before publication. Views and opinions are based on current market conditions and are subject to change. The yield shown is expressed as a % per annum of the current NAV of the fund. It is an estimate for the next 12 months, assuming that the fund's portfolio remains unchanged and there are no defaults or deferrals of coupon payments or capital repayments. The yield is not guaranteed. Nor does it reflect any charges. Investors may be subject to tax on distributions. For information on our funds and the relevant risks, refer to the Key Information Documents/Key Investor Information Documents (local languages) and Prospectus (English, French, German, Spanish, Italian), and the financial reports, available from [www.invesco.eu](http://www.invesco.eu).
