Investment risks

For complete information on risks, refer to the legal documents. The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. Debt instruments are exposed to credit risk which is the ability of the borrower to repay the interest and capital on the redemption date. Changes in interest rates will result in fluctuations in the value of the fund. The fund uses derivatives (complex instruments) for investment purposes, which may result in the fund being significantly leveraged and may result in large fluctuations in the value of the fund. As this fund is invested in a particular sector, you should be prepared to accept greater fluctuations in the value of the fund than for a fund with a broader investment mandate.

Fund Strategy

The fund aims to generate a positive gross return (subject to prevailing interest rate environment and other factors) through a diversified conservative allocation (low duration and high credit quality) to rates and credit. Low duration refers to investments which typically have short-term maturity and low interest rate exposure.

Past performance does not predict future returns. Data points are as at month end.
