Investment risks

For complete information on risks, refer to the legal documents. The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. Debt instruments are exposed to credit risk which is the ability of the borrower to repay the interest and capital on the redemption date. Changes in interest rates will result in fluctuations in the value of the fund. The fund uses derivatives (complex instruments) for investment purposes, which may result in the fund being significantly leveraged and may result in large fluctuations in the value of the fund. The Fund may invest in a dynamic way across assets/asset classes, which may result in periodic changes in the risk profile, underperformance and/or higher transaction costs. The fund may invest in distressed securities which carry a significant risk of capital loss. The fund may invest in contingent convertible bonds which may result in significant risk of capital loss based on certain trigger events. Investments in debt instruments which are of lower credit quality may result in large fluctuations in the value of the fund.

Fund Strategy

A flexible fund that is focused on generating high level of income together with long-term capital growth from bonds and equities. Within the bond portion, the bias is towards investing in higher-yielding bonds across a broad range of sectors, particularly financials. To increase the opportunities for dividend income and potential capital growth, the fund also holds an allocation to European equities. The fund managers also use cash and government bonds to manage downside risk.
