Investment risks

For complete information on risks, refer to the legal documents. The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. Debt instruments are exposed to credit risk which is the ability of the borrower to repay the interest and capital on the redemption date. Changes in interest rates will result in fluctuations in the value of the fund. The fund uses derivatives (complex instruments) for investment purposes, which may result in the fund being significantly leveraged and may result in large fluctuations in the value of the fund. The fund may hold a large amount of Asset Backed Securities (ABS) (complex instruments) as well as other lower quality debt securities which may impact the liquidity of the fund under certain circumstances. The Fund may invest in a dynamic way across assets/asset classes, which may result in periodic changes in the risk profile, underperformance and/or higher transaction costs. The fund may invest in distressed securities which carry a significant risk of capital loss. The fund may invest in certain securities listed in China which can involve significant regulatory constraints that may affect the liquidity and/or the investment performance of the fund. Investments in debt instruments which are of lower credit quality may result in large fluctuations in the value of the fund. As a portion of the Fund may be exposed to less developed countries, you should be prepared to accept large fluctuations in the value of the Fund.

Fund Strategy

This fund has a flexible investment approach that can go anywhere. It is not tied to a benchmark and is not biased towards any specific fixed income sector or region. It invests across the full spectrum of the fixed income universe, with active exposures to interest rate, credit and currency markets (both long and short positions) and flexible duration management (2-9 years range). Duration is a measurement of interest rate risk. It considers a bond's maturity, yield, coupon and call features.

Past performance does not predict future returns. Data points are as at month end.
